

HI-REL LIMITERS

**Block High Level RF Interference ...
Protect Your Low Noise Receivers.**

500 kHz to 8.2 GHz

The new CLM series takes our growing limiter lineup to higher frequencies (8.2 GHz, for starters) with a footprint only 0.12 x 0.12 x 0.045" high and a ceramic hermetic package, nitrogen filled, for the utmost in reliability! Like the rest of our limiters, they offer excellent protection against ESD spikes, power surges and RF transceiver leakage in hostile environments, where unwanted signals prevail.

All of our limiters react nearly instantaneously, as fast as 2 ns for response and 8 ns for recovery, to reduce +5 to +36 dBm inputs to as little as 0 dBm, with small-signal insertion loss as low as 0.23 dB! Data sheets, performance curves, environmental specifications, and more are online at minicircuits.com, so why wait? Order today, and get long-term protection for your sensitive applications as soon as tomorrow!

Coaxial unibody patent 6,943,646

 RoHS compliant.
